                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for inducing an immune response against autologous immunoglobulin E (IgE) in an animal. The method comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IgE, and T helper cell epitope (TH epitope) which is foreign to the animal, by antigen presenting cells (APCs) of the animal's immune system. The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating autologous IgE in the animal. This method is useful for downregulating and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C1-C2-C3-C4 domains used to create the epitopes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-SEP-2000;

constant region. The invention is based on the constant domain in the polypeptide that includes the CH1 (i.e. constant domain in the heavy chain) and/or CH4 domain(s) of an IgE molecule, coupled to a carrier, can be used to induce in a mammal the production of antibodies that specifically bind to IgE of the mammal. Compositions are provided for inducing self-specific anti-IgE antibodies. These contain carriers foreign to the immunised mammal coupled to polypeptides containing fragments of the IgE molecule, especially fragments including the constant CH1 and/or CH4 domain, but not the CH3 domain. CH1 polypeptides have at least 95% identity to amino acids 1-110, 105, 5-105 or 5-95 of the present sequence, this carriers is a sequence.
                                                                                                                                                                                                                     Composition for treating immunoglobulin (Ig) E-mediated disorder such as anaphylactic shock, allergic rhinitis and conjunctivitis, comprises a polypeptide that includes CHI and/or CH4 domains of IgE molecule coupled to a carrier
                                                                                                                                                                                                                                                                                       WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           313-428, 313-425, 317-428 or 317-425 of the present sequence. The anti-IqE antibodies reduce or eliminate the pool of free IgE in the mammal's serum. Alternatively, a polynucleotide encoding a fusion protein comprising the carrier and IgE-derived polypeptide is administered. The compositions and polynucleotides are used to inhibit or treat IgE-mediated disorders such as anaphylactic shock, altergic rhinitis or conjunctivitis, an altergic reaction to an altergen such as fur, dust or food, an asthmatic reaction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                eczema or urticaria (all claimed).
